CSS

# HTML5

- HTML的標籤是成對的
  - 「屬性」 ( property ) 和「值」 ( value )
- HTML5的主要差異
  - 可以開 WebSocket
  - 多了 Video 、 Canvas等標籤
  - Web storage
    - key-value pair 存字串
    - 類似 cookie (4KB) 但有5MB
    - local(可跨分頁) 、 session

```
<!DOCTYPE html>
<html>
<!-- created 2010-01-01 -->
<head>
  <title>sample</title>
</head>
<body>
  <p>Voluptatem accusantium
  totam rem aperiam.</p>
</body>
</html>
```

# CSS

- 裝飾HTML標籤的語言
  - 顏色、字型、排版、動畫、自適應
  - 選擇器 (selector)
    - 針對 tag
    - 針對 id (#id)
    - 針對 class (.class)
- CSS3
  - 加強動畫效果
  - 3D 效果
- 自學資源
  - Bootstrap
  - <http://zh-tw.learnlayout.com/>

```
h1 { color: white;
      background: orange;
      border: 1px solid black;
      padding: 0 0 0 0;
      font-weight: bold;
    }
/* begin: seaside-theme */

body {
  background-color: white;
  color: black;
  font-family: Arial, sans-serif;
  margin: 0 4px 0 0;
  border: 12px solid;
}
```

# JAVASCRIPT

- 讓HTML可以產生互動 (基本)
  - Browser Object Model, 如 DOM 的概念
  - Loop、Conditions
- 讓HTML可以產生互動 (進階)
  - AJAX, jQuery
  - Animations
  - Events

```
<!DOCTYPE html>
<html>
<body>

<p>Click the button to loop through a block of code five times.</p>

<button onclick="myFunction()">Try it</button>

<p id="demo"></p>

<script>
function myFunction() {
  var text = "";
  var i;
  for (i = 0; i < 5; i++) {
    text += "The number is " + i + "<br>";
  }
  document.getElementById("demo").innerHTML = text;
}
</script>

</body>
</html>
```

# HTML5 提供的API

1. Video/Audio API ( 影音多媒體)
2. Canvas API ( 繪圖)
3. Drag and Drop API ( 拖放操作)
4. Web Storage API ( 網頁儲存)
5. Web SQL Database ( 網頁SQL 資料庫)
6. Indexed Database API ( 索引資料庫)
7. Geolocation API ( 地理定位)
8. File API ( 用戶端檔案存取)
9. Communication API ( 跨文件通訊)
10. Web Workers API ( 背景執行)
11. Web Sockets API ( 用戶端與伺服器端的雙向通訊)
12. XMLHttpRequest Level 2 (Ajax 技術)
13. Server-Sent Events ( 伺服器端的資料推播)

# HTML5-基礎結構

```
01:<!doctype html> — DOCTYPE
02:<html>
03:  <head>
04:    <meta charset="utf-8">
05:    <title> 我的第一份 HTML5 文件 </title>
06:  </head>
07:  <body>
08:    <h1>Hello! HTML 5!</h1>
09:  </body>
10:</html>
```

HTML 文件的標頭

HTML 文件的主體

# HTML5-文字

<p> 聽風在唱 </p>

<p><font size="1" color="green" face=" 微軟正黑體 "> 聽風在唱 </font></p>

<p><font size="2" color="purple" face=" 微軟正黑體 "> 聽風在唱 </font></p>

<p><font size="3" color="red" face=" 標楷體 "> 聽風在唱 </font></p>

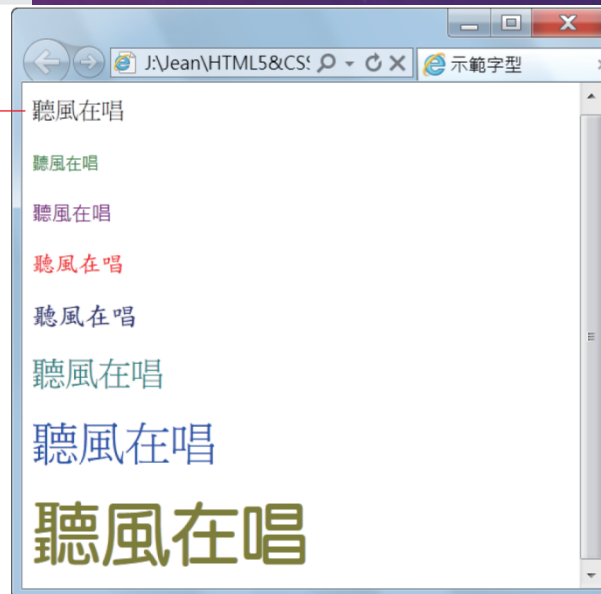

<p><font size="4" color="navy" face=" 標楷體 "> 聽風在唱 </font></p>

<p><font size="5" color="teal" face=" 新細明體 "> 聽風在唱 </font></p>

<p><font size="6" color="blue" face=" 新細明體 "> 聽風在唱 </font></p>

<p><font size="7" color="olive" face=" 華康粗圓體 "> 聽風在唱 </font></p>

預設的文字格式  
為 3 級大小、  
黑色、細明體

# HTML5-ID屬性 (I)

## Example

Use CSS to style an element with the id "myHeader":

```
<style>
#myHeader {
    background-color: lightblue;
    color: black;
    padding: 40px;
    text-align: center;
}
</style>

<h1 id="myHeader">My Header</h1>
```

Result:

My Header

# HTML5-ID屬性 (II)

```
<!DOCTYPE html>
<html>
<body>

<h2>Using The id Attribute in JavaScript</h2>
<p>JavaScript can access an element with a specified id by using the getElementById() method:</p>

<h1 id="myHeader">Hello World!</h1>
<button onclick="displayResult()">Change text</button>

<script>
function displayResult() {
    document.getElementById("myHeader").innerHTML = "Have a nice day!";
}
</script>

</body>
</html>
```

## Using The id Attribute in JavaScript

JavaScript can access an element with a specified id by using the `getElementById()` method:

## Hello World!

Change text

# HTML5-CLASS屬性 (I)

```
<!DOCTYPE html>
<html>
<head>
<style>
/* Style the element with the id "myHeader" */
#myHeader {
  background-color: lightblue;
  color: black;
  padding: 40px;
  text-align: center;
}

/* Style all elements with the class name "city" */
.city {
  background-color: tomato;
  color: white;
  padding: 10px;
}
</style>
</head>
<body>

<h2>Difference Between Class and ID</h2>
<p>An HTML page can only have one unique id applied to one specific element, while a class name can be applied to multiple elements.</p>

<!-- A unique element -->
<h1 id="myHeader">My Cities</h1>

<!-- Multiple similar elements -->
<h2 class="city">London</h2>
<p>London is the capital of England.</p>

<h2 class="city">Paris</h2>
<p>Paris is the capital of France.</p>

<h2 class="city">Tokyo</h2>
<p>Tokyo is the capital of Japan.</p>

</body>
</html>
```

## Difference Between Class and ID

An HTML page can only have one unique id applied to one specific element, while a class name can be applied to multiple elements.

### My Cities

#### London

London is the capital of England.

#### Paris

Paris is the capital of France.

#### Tokyo

Tokyo is the capital of Japan.

# HTML5-CLASS屬性 (II)

```
<!DOCTYPE html>
<html>
<style>
.city {
  background-color: tomato;
  color: white;
  padding: 10px;
}

.main {
  text-align: center;
}
</style>
<body>

<h2>Multiple Classes</h2>
<p>All three headers have the class name "city". In addition, London also have the class name "main", which center-aligns the text.</p>

<h2 class="city main">London</h2>
<h2 class="city">Paris</h2>
<h2 class="city">Tokyo</h2>

</body>
</html>
```

## Multiple Classes

All three headers have the class name "city". In addition, London also have the class name "main", which center-aligns the text.

**London**

**Paris**

**Tokyo**

# HTML5-CLASS屬性 (III)

```
<!DOCTYPE html>
<html>
<style>
.city {
  background-color: tomato;
  color: white;
  padding: 10px;
}
</style>
<body>

<h2>Same Class, Different Tag</h2>
<p>Even if the two elements do not have the same tag name, they can have the same class name, and
get the same styling:</p>

<h2 class="city">Paris</h2>
<p class="city">Paris is the capital of France.</p>

</body>
</html>
```

## Same Class, Different Tag

Even if the two elements do not have the same tag name, they can have the same class name, and get the same styling:

Paris

Paris is the capital of France.

# HTML5-CLASS屬性 (IV)

```
<!DOCTYPE html>
<html>
<body>

<h2>Using The class Attribute in JavaScript</h2>
<p>Click the button, to hide all elements with the class name "city", with JavaScript:</p>

<button onclick="myFunction()">Hide elements</button>

<h2 class="city">London</h2>
<p>London is the capital of England.</p>

<h2 class="city">Paris</h2>
<p>Paris is the capital of France.</p>

<h2 class="city">Tokyo</h2>
<p>Tokyo is the capital of Japan.</p>

<script>
function myFunction() {
  var x = document.getElementsByClassName("city");
  for (var i = 0; i < x.length; i++) {
    x[i].style.display = "none";
  }
}
</script>

</body>
</html>
```

## Using The class Attribute in JavaScript

Click the button, to hide all elements with the class name "city", with JavaScript:

Hide elements

### London

London is the capital of England.

### Paris

Paris is the capital of France.

### Tokyo

Tokyo is the capital of Japan.
